

Owner's Manual Power Take-Offs

Effective: March 2013

Supersedes: HY25-1715-M1/US November 2011

247 Series

/! WARNING — User Responsibility

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.

The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalog and in any other materials provided from Parker or its subsidiaries or authorized distributors.

To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.

Offer of Sale

The items described in this document are hereby offered for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. This offer and its acceptance are governed by the provisions stated in the "Offer of Sale".

Patent Information

The Chelsea® Power Take-Off or its components shipped with this owner's manual may be manufactured under one or more of the following U.S. patents: 4610175 5228365 4597301 5645363 6151975 6142274 6260682 7159701 B2 7510064 US7690450 B2 Other patents pending.

Safety Information

These instructions are for your safety and the safety of the end user. Read them carefully until you understand them.

General Safety Information

To prevent injury to yourself and/or damage to the equipment:

- Read carefully all owner's manuals, service manuals, and/or other instructions.
- Always follow proper procedures, and use proper tools and safety equipment.
- Be sure to receive proper training.
- Never work alone while under a vehicle or while repairing or maintaining equipment.
- Always use proper components in applications for which they are approved.
- Be sure to assemble components properly.
- Never use worn-out or damaged components.
- Always block any raised or moving device that may injure a person working on or under a vehicle.
- Never operate the controls of the Power Take-Off or other driven equipment from any position that could result in getting caught in the moving machinery.

Proper Matching of P.T.O.

WARNING: A Power Take-Off must be properly matched to the vehicle transmission and to the auxiliary equipment being powered. An improperly matched Power Take-Off could cause severe damage to the vehicle transmission, the auxiliary driveshaft, and/or the auxiliary equipment being powered. **Damaged components or equipment could malfunction causing serious personal injury to the vehicle operator or to others nearby.**

To avoid personal injury and/or equipment damage:

- Always refer to Chelsea catalogs, literature, and owner's manuals and follow Chelsea recommendations when selecting, installing, repairing, or operating a Power Take-Off.
- Never attempt to use a Power Take-Off not specifically recommended by Chelsea for the vehicle transmission.
- Always match the Power Take-Offs specified output capabilities to the requirements of the equipment to be powered.
- Never use a Power Take-Off whose range of speed could exceed the maximum safe speed of the equipment to be powered.

Cold Weather Operation of Powershift P.T.O.

WARNING: During extreme cold weather operation [32°F (0°C) and lower], a disengaged powershift Power Take-Off can momentarily transmit high torque that will cause unexpected output shaft rotation. This is caused by the high viscosity of the transmission oil when it is extremely cold. As slippage occurs between the Power Take-Off clutch plates, the oil will rapidly heat up and the viscous drag will quickly decrease.

The Power Take-Off output shaft rotation could cause unexpected movement of the driven equipment resulting in serious personal injury, death or equipment damage.

To avoid personal injury and/or equipment damage:

- Driven equipment must have separate controls.
- The driven equipment must be left in the disengaged position when not in operation.
- Do not operate the driven equipment until the vehicle is allowed to warm up.

This symbol warns of possible personal injury.

Safety Information

Rotating Auxiliary Driveshafts

WARNING:

- Rotating auxiliary driveshafts are dangerous. You can snag clothes, skin, hair, hands, etc. This can cause serious injury or death.
- Do not go under the vehicle when the engine is running.
- Do not work on or near an exposed shaft when the engine is running.
- Shut off the engine before working on the Power Take-Off or driven equipment.
- Exposed rotating driveshafts must be guarded.

Guarding Auxiliary Driveshafts

WARNING: We strongly recommend that a Power Take-Off and a directly mounted pump be used to eliminate the auxiliary driveshaft whenever possible. If an auxiliary driveshaft is used and remains exposed after installation, it is the responsibility of the vehicle designer and P.T.O. installer to install a guard.

Using Set Screws

WARNING: Auxiliary driveshafts may be installed with either recessed or protruding set screws. If you choose a square head set screw, you should be aware that it will protrude above the hub of the yoke and may be a point where clothes, skin, hair, hands, etc. could be snagged. A socket head set screw, which may not protrude above the hub of the yoke, does not permit the same amount of torquing as does a square head set screw. Also a square head set screw, if used with a lock wire, will prevent loosening of the screw caused by vibration. Regardless of the choice made with respect to a set screw, an exposed rotating auxiliary driveshaft must be guarded.

IMPORTANT: Safety Information and Owner's Manual

Chelsea Power Take-Offs are packaged with safety information decals, instructions, and an owner's manual. These items are located in the envelope with the P.T.O. mounting gaskets. Also, safety information and installation instructions are packaged with some individual parts and kits. **Be sure to read the owner's manual before installing or operating the P.T.O.** Always install the safety information decals according to the instructions provided. Place the owner's manual in the vehicle glove compartment.

WARNING: Operating the P.T.O. with the Vehicle in Motion

Some Power Take-Offs may be operated while the vehicle is in motion. To do so, the P.T.O. must have been properly selected to operate at highway speeds and correctly matched to the vehicle transmission and the requirements of the driven equipment.

If in doubt about the P.T.O.'s specifications and capabilities, avoid operating the P.T.O. when the vehicle is in motion. Improper application and/or operation can cause serious personal injury or permanent failure of the vehicle, the driven equipment, and/or the P.T.O.

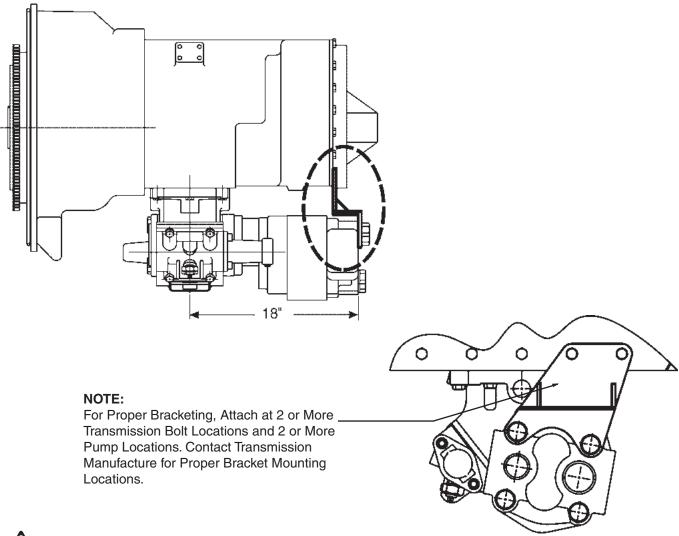

Always remember to disengage the P.T.O. when the driven equipment is not in operation.

This symbol warns of possible personal injury.

Direct Mount Pump Support Recommendations

Use caution to ensure that bracket does not pre-load pump P.T.O. mounting

Chelsea strongly recommends the use of pump supports (Support Brackets) in all applications. P.T.O. warranty will be void if a pump bracket is not used when:

- 1) The combined weight of pump, fittings and hose exceed 40 pounds [18.14 kg].
- 2) The combined length of the P.T.O. and pump is 18 inches [45.72 cm] or more from the P.T.O. centerline to the end of the pump.

ALSO: Remember to pack the female pilot of the P.T.O. pump shaft with grease before installing the pump on the P.T.O. (reference Chelsea grease pack 379688).

This symbol warns of possible personal injury.

Foreword

This booklet will provide you with information on correct installation of Chelsea® Power Take-Offs (P.T.O.s). Proper installation and set up procedures will help you get additional and more profitable miles from your truck equipment and components.

It is important to be sure that you are getting the right transmission/P.T.O. combination when you order a new truck. An inadequate transmission will overwork any P.T.O. in a short period of time. In addition, a mismatched transmission and P.T.O. combination can result in unsatisfactory performance of your auxiliary power system from the start.

If you have questions regarding correct P.T.O. and transmission combination, please contact your local Chelsea[®] Auxiliary Power Specialist. They can help you select the properly matched components to ensure correct and efficient applications.

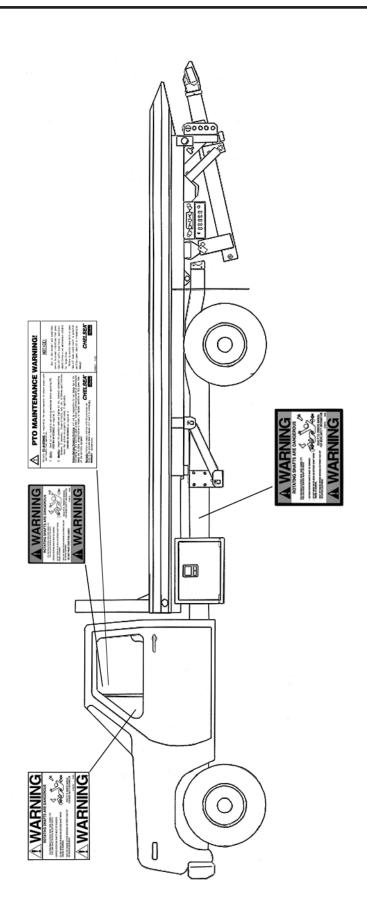

Chelsea P.T.O. Safety Label Instructions

- 1. The two black and orange on white 5" x 7" pressure sensitive vinyl labels, part number 379274; must be placed on the vehicle frame rails (one (1) on each side), in a position that would be HIGHLY visible to anyone that would go under the truck near the P.T.O. rotating shaft. If the vehicle is to be painted after these labels are installed, cover them with two (2) blank masking covers. Remove the masking covers after painting.
- 2. Place the one (1) black and orange on white 3.5" x 5" pressure sensitive vinyl label, part number 379275, on the visor nearest the operator of the vehicle, this must be placed near the P.T.O. visor label (Item #3).
- 3. Place the one (1) red and white with black lettering 3.5" x 7.5" pressure sensitive vinyl label, part number 379915, on the opposite side of the visor from the above label # 379275.
- 4. Place the one (1) white and black heavy duty card, part number 379276, in the vehicle glove box. Again in a position highly visible to the operator, for example: try to place this card on top of whatever may be in the glove box.

If you require labels, please order part number 328946X at no charge from your local Chelsea Warehouse or send request direct to:

Parker Hannifin Corporation Chelsea Products Division 8225 Hacks Cross Road Olive Branch, MS 38654 Customer Service: (662) 895-1011

Function of Auxiliary Power Shafts

An auxiliary power shaft transmits torque from the power source to the driven accessory. The shaft must be capable of transmitting the maximum torque and R.P.M. required of the accessory, plus any shock loads that develop.

An auxiliary power shaft operates through constantly relative angles between the power source and the driven accessory, therefore, the length of the auxiliary power shaft must be capable of changing while transmitting torque. This length change, commonly called "slip movement", is caused by movement of the power train due to torque reactions and chassis deflections.

Joint operating angles are very important in an auxiliary power joint application. In many cases, the longevity of a joint is dependent on the operating angles. (See chart below)

This information is limited to 1000 through 1310 series applications. For applications requiring a series larger than 1310, contact your local Chelsea distributor.

Determining Shaft Type

- 1) Solid or tubular?
 - a) In applications requiring more than 1000 R.P.M. or where the application necessitates a highly balanced auxiliary power shaft, a tubular shaft should be used.
 - Spicer's solid shafting auxiliary power joints are designed for 1000 or less R.P.M. intermittent service such as:

Driving small hydraulic pumps

Driving winches

Driving low speed product pumps

2) Joint Series should be determined using the chart on the following page.

	Spicer® Universal C	Joint Operating Angles	
Prop. Shaft R.P.M.	Max. Normal Operating Angle	Prop. Shaft R.P.M.	Max. Normal Operating Angle
3000	5° 50'	1500	11° 30'
2500	7° 00'	1000	11° 30'
2000	8° 40'	500	11° 30'

Above based on angular acceleration of 100 RAD/SEC²

2008 - 2013 SEIC Enable/Disable Conditions

Vehicle Conditions to Enable SEIC (all are required)	Vehicle Conditions that Disable SEIC (any one required)	Gasoline Engine	Diesel Engine
Parking brake applied.	Parking brake disengaged.	Yes	Yes
Foot off of service brake	Depressing service brake	Yes (1)	Yes (2)
Vehicle in PARK (automatic trans.)	Vehicle taken out of PARK	Yes	Yes
Foot off of accelerator pedal		Yes	Yes
Vehicle speed is 0 mph (stationary)		Yes	Yes
Brake lights functional	Brake light circuit disconnected	Yes	Yes
Engine at a stable base idle speed		Yes	Yes
Trans Oil Temp above 20°F	Transmission Oil Temperature (TOT) Limit exceeds 240°F.	Yes (1)	Yes
Eng Coolant Temp above 20°F	Engine Coolant Temperature (ECT) above 234°F	No	Yes
Eng Coolant Temp above 140°F (3)	Engine Coolant Temperature (ECT) above 220°F	Yes (1)	No
	Catalyst Temperature Limit	Yes (1)	Yes

- (1) A "Change-of-State" at the "PTO-Request" circuit is required to re-invoke SEIC. When a disabler is seen by the PCM, the "PTO-Indicator" circuit changes from "Ground-Source" to an "Open-Circuit". After approximately 3 seconds SEIC drops out, returning the engine speed to base idle. For vehicle-stationary operation, the automatic transmission torque converter unlocks as engine speed proceeds below 1200 R.P.M.. To re-initiate SEIC the operator must turn off the aftermarket P.T.O. switch (removing command voltage to the "PTO-Mode" circuit) and then turn it back on again.
- (2) SEIC is automatically re-activated after approximately 3 seconds after the disabling condition is removed.
- (3) MY2013 Gas Engine Applications Engine Coolant Temperature above 30°F

SEIC / P.T.O. – General System Behavior

- To guarantee full advertised torque capability at the automatic transmission P.T.O. gear and through the
 aftermarket P.T.O. clutch, the transmission torque converter must be locked, and the hydraulic line pressure
 serving the aftermarket P.T.O. clutch must be elevated. Applying battery voltage to the P.T.O. circuit is the
 signal to the transmission to enter SEIC strategy and command these two important functions. This applies
 to both stationary and mobile P.T.O. operations.
- If an SEIC disabler occurs:
 - GAS engines will require a "change-of-state", meaning the operator is required to turn off voltage to the "P.T.O.-Request" circuit, and back on again to re-invoke SEIC and P.T.O. operation.
 - DIESEL engines do not require a "change-of-state" at the "P.T.O." circuit. Once the disabling condition is removed, the strategy re-invokes SEIC after approximately 3 seconds, automatically returning the engine speed back to what was commanded by the operator prior to the disabling condition.
- Battery Charge Protection (BCP): A diesel-only function. When it is switched on the engine speed goes
 immediately to 1200 R.P.M., and stays there even if the battery is fully charged. From this state it uses system
 voltage as well as ambient air temp., engine oil temperature information to raise engine speed higher to
 maintain a certain battery charge. Maximum engine speed in BCP mode is 2400 R.P.M. The BCPSW circuit
 may be wired to circuit to Ignition-Hot-in-Run to make it "automatic" for ambulance. Park-Brake-Set is one of
 the enablers of BCP.
- If the Transmission Oil Temperature (TOT) sensor reaches 240°F, then the TorqShift™ torque converter may disengage, preventing torque from being delivered to the transmission P.T.O. gear.
- SEIC / P.T.O. strategy function in the PCM is not affected by the loss of vehicle battery electrical power.
- SEIC Ramp Rate (fixed, not programmable):
 - GAS engines: 400 R.P.M./second.
 - DIESEL engines: When first applying battery voltage to the P.T.O. circuit the PCM directs the engine to go to the initial target that it sees at the R.P.M. circuit at 200 R.P.M./second (1200 R.P.M. if there is no resistor in the R.P.M. circuit open circuit). If resistance is subsequently changed at the R.P.M. circuit then the ramp rate to this second speed target is virtually instantaneous (as fast as the diesel engine can get there).
- Correlation between engine speed and resistor values:
 - The external voltage source that the aftermarket P.T.O. system designer uses to command SEIC through the "P.T.O." or "P.T.O.-Request" circuits must be the same as that used by the PCM internally for predictable SEIC function. Reasoning is that a fully-charged vehicle battery fluctuates with ambient temperature.
 - The correlation will be better for diesel engines since the diesel engine SEIC system offers buffered PCM voltage and ground circuits to complete the resistor circuits for engine speed, while the gas engine system forces the SEIC circuit installer to use chassis voltage and ground.
 - If there is a high electrical demand on the chassis battery, such as from aftermarket inverters or generators, etc., the actual elevated idle engine speed may vary with that demand for any given resistance in the SEIC circuit. More so for gas engine systems than diesel since gas engine uses chassis battery voltage as a reference.

9

2008-2013 Ford Super Duty Overview

SEIC / P.T.O. – General System Behavior, continued

- · GAS Engine Only:
 - Normal base engine calibration allows approximately +/-50 R.P.M. fluctuation. If any factory vehicle accessories are used during SEIC, e.g. a/c, defroster, etc., then that fluctuation may increase to approximately +/-100 R.P.M. or more.
 - The sudden loss of aftermarket P.T.O. hydraulic pressure during SEIC / P.T.O. operation, like a ruptured hose, may send SEIC engine speed to near 3000 R.P.M. It is recommended that a hydraulic pressure switch linked to SEIC / P.T.O. be added to disable SEIC / P.T.O. when a hose ruptures.
 - Because of a service brake circuit characteristic at engine-start, invoking SEIC may cause the diagnostic error code FFG_BOO to get flagged (recorded in the PCM). To avoid this, simply tap the service brake pedal sometime after engine-start and prior to invoking SEIC. Once the code is set, SEIC may not be available until it is erased.
 - Gas engines require a "change-of-state" at the P.T.O.-Mode and P.T.O.-Engage circuits whenever a disabler turns off SEIC (remove battery voltage signal and re-apply).
 - For aftermarket remote engine start-stop: a change-of-state is required to get SEIC to function again.

Special Situations

Mobile P.T.O. Operation (TorqShift™ Automatic or M6 manual Transmission)

Always apply battery voltage to the P.T.O. wire to keep SEIC active. Engine speed is no longer commanded by SEIC, instead it is conrolled by the foot throttle. The increased line pressure and torque converter commands must remain active to protect the automatic transmission. Convert P.T.O. solenoid power to direct-battery instead of through the SEIC circuit suggested in this bulletin, possibly using the VSO signal circuit. A slightly harsher automatic transmission shift can be expected but is harmless.

Alternative Calibration

All new Ford light trucks have an "Alternative Calibration" or ALT-CAL installed in the PCM that conditions the powertrain during its early lifetime. It may increase the PARK-idle or drive-idle speed of the engine, by as small as 50 R.P.M. or by several hundred. It affects SEIC initiation by not letting it activate, because one of the SEIC enablers is having a steady, base, idle speed, generally near 650 R.P.M. If ALT-CAL sets the idle at 700 R.P.M. then SEIC activation will be prevented. ALT-CAL is normally removed after 50 key-on starts, or by driving over 5 continuous miles; it is also sometimes erased by disconnecting the battery for a minute or so.

In Cab P.T.O. Switch Installation

Before starting your electrical wiring installation, locate a position in the cab for mounting the P.T.O. switch and mounting bracket. The shaded area in **Figure 1** shows the Occupant Protection Zone of the deployed air bags that are available in these vehicles.

WARNING: To avoid personal injury or equipment damage: Do not install any item from a Chelsea Power Take-Off (ie: P.T.O. switch or mounting bracket) in the Occupant Protection Zone.

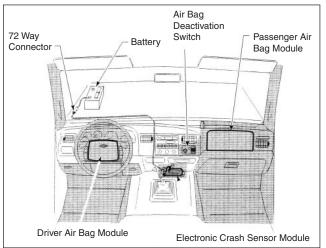

Figure 1

NOTE: Before starting installation of the electrical wiring, disconnect the battery cables from the battery and secure to prevent accidental contact.

CAUTION: Before drilling any holes, make sure there is adequate clearance on both sides.

For electrical installation see installation sketch on page 18 for Non E.O.C. and page 20 for E.O.C.

- 1. Locate suitable location to install P.T.O. Switch.
- 2. Locate and remove the customer access panel located on the lower left portion of the instrument panel (driver's side). (**Figure 2**)
- After determining the location of the P.T.O. switch, run wiring assembly over to the area under the vehicle steering column. We are now ready to attach the wires from the Chelsea wiring harness (329598X).

NOTE: Wiring Strategy is slightly different between the Gas and Diesel engines. Use the charts listed on pages 19 and 21 for complete wiring chart information for prior years when using Chelsea wiring harness 329598X.

In Cab Electrical Installation

4. Located in the cabin, tagged and bundled above the parking brake assembly (Figure 3) are the wires needed to connect the Chelsea P.T.O. wiring harness to the Ford SEIC strategy. Wires that will be connected at this bundle from the Chelsea wiring harness are the Black, Orange, Yellow, White and Red wires. All have butt connector ends. Connect these wires using Wiring Charts page 19 or 21 of this manual.

Figure 3

5. Now locate Ford circuit # 294 (White w/light blue) or for MY2008 circuit CBP44 (purple). This wire can be found under-dash on the right side of the customer access and is blunt cut. Connect Chelsea wire that is White w/ Light Blue stripe using a butt connector to this Ford wire. The only wire left to connect at this location is the black ground wire. Attach the ground wire with ring terminal on its end, to one of the screws located on the right side of the access area dash frame (Figure 4). Reference Wiring Charts on page 19 or 21 of this manual.

Figure 4

NOTE: It is important to remember that a solid electrical connection is essential when installing any electrical device or option. A proper crimp is shown in **Figure 5**.

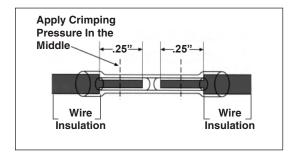

Figure 5

 Find a suitable location to route the wiring harness out of the cab area and to the location of the manifold.
 Make sure wiring is clear of driveline and exhaust.

CAUTION: Apply battery voltage to the Diesel "P.T.O." or "Gas P.T.O. - Mode" (Circuit 2242), MY2008 (CE912) wire is what the transmission looks for to initiate commands. Failing to do so may show up as low or oscillating hydraulic line pressure and low or no P.T.O. torque or pump flow output. Any attempt to operate the Power Take-Off at elevated idle without these commands may result in under-capacity P.T.O. clutch wear, resulting in rapid contamination of transmission fluid and internal transmission damage. This applies to both stationary and mobile automatic transmission P.T.O. operations. Reference Wiring charts on pages 19 or 21.

CAUTION: When installing the P.T.O., always wear protective clothing and safety glasses.

Installation of a 247 P.T.O. will be faster and easier if several steps are completed before mounting the unit to the transmission. On a clean secure work surface complete the following steps.

7. There are two split dowels that will act as guides when installing the P.T.O. to the transmission. Gently squeeze the dowel together and install in the top and lower right side mounting hole of the P.T.O. as shown in **Figure 6**. The dowel should be flush with the side away from the mounting face (**Figures 6 and 7**) and protrude into the corresponding mounting holes of the transmission aperture when installing the P.T.O.

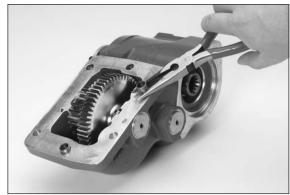

Figure 6

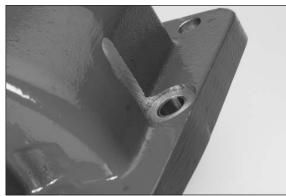

Figure 7

8. We are now ready to move to the installation of the P.T.O., but before installing the unit we will need to remove the shift cable bracket that is to the right side of the P.T.O. aperture. Use a 14mm wrench to remove the two capscrews. Remove the cable from the transmission range selector by pulling it straight off. Place the bracket and cable on the top of the transmission to allow easier installation of the P.T.O.

NOTE: On some early production Ford Super Duties the shifter bracket design was changed by about 3mm. The increase in size of the bracket interfered with the Power Take-Off. See page 23 for Ford approved modification of this bracket for P.T.O. clearance.

This transmission does not require the oil to be drained for the P.T.O. installation, but expect some oil to weep when covers and plugs are removed.

WARNING: Oil may be hot. Use extreme caution to assure that you do not accidentally come in contact with hot oil.

9. Remove the pipe plug from the transmission pressure port (**Figure 8**) and install the 90° male elbow (379698) in the opening. Position the fitting (**Figure 9**) at a 10 o'clock position as you look at the fitting.

Figure 8

Figure 9

10. Remove the P.T.O. aperture cover plate and gasket (**Figure 10**).

Figure10

IMPORTANT: Discard the gasket. It will NOT be used when installing the P.T.O. on the transmission.

NOTE: All hose routing described herein is the recommended routing for the 6.8L gas engine. Other hose routing options may be required depending on the chassis model (4 x 2 or 4 x 4) and or engine selection (6.8L Gas or 6.0L Diesel)

11. Connect hose 329232-1X (Transmission to Hydraulic Valve) to the fitting on the transmission. Route as shown in **Figure 11**. Hold hose fitting in desired position and tighten lock nut with a wrench until solid feeling is encountered. From that point, apply one-sixth turn.

Figure 11

12. Six fasteners (Figure 12) are used to attach the P.T.O. to the transmission opening. The longest bolt requires an O-Ring (28-P-200) on it to ensure a positive seal. Slide this on now after applying lube to the O-Ring.

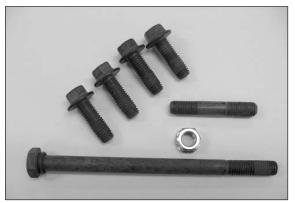

Figure 12

13. Slide the special gasket (22-P-120) supplied with the P.T.O. over the split dowels (Figure 13) installed in the P.T.O. This is the controlled compression gasket that is used to eliminate the setting of the gear backlash between he P.T.O. and transmission.

NOTE: Do not use sealing compounds because they are generally incompatible with automatic transmission fluids and could possibly contaminate valve bodies in the transmission.

Figure 13

14. Install the one stud from the stud kit (8000-19X) to the top hole on the transmission P.T.O. aperture pad. (**Figure 14**)

Figure 14

15. Tighten the stud and torque to 17-19 Lbs. ft. (23-26 N.m.)

CAUTION: Overtightening of the stud may damage stud and/or Transmission threads.

 Mount the Power Take-Off to the transmission at this time by sliding the top P.T.O. mounting hole w/dowel pin over the shoulder stud. Guide other dowel pin into hole. (Figure 15)

Figure 15

17. Attach the self locking nut to the shoulder stud. Do not tighten down at this time. (**Figure 16**)

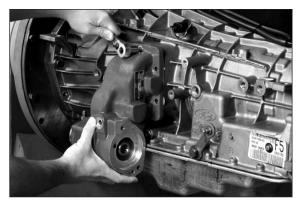

Figure 16

18. Make sure the O-Ring (28-P-200) from the stud kit is still on the longer hex head capscrew. Install this hex head capscrew and O-Ring in the bottom mounting hole and finger tighten. (**Figure 17**)

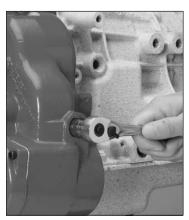

Figure 17

IMPORTANT: Make sure the O-Ring is positioned in the counter bore.

- 19. Finish fastening the P.T.O. to the transmission using the remaining 4 flanged hex head bolts.
- 20. Torque all 5 capscrews (**Figure 18**) to 25 Lbs. ft. [34 N.m.] and torque the self locking nut to 35-40 Lbs. ft. [48-54 N.m.]

Figure 18

- 21. Reinstall the cable to the transmission selector and reattach the bracket that was removed in Step 14. Torque Capscrews to 22-29 Lbs. ft. [30-40 N.m.]
- 22. Install Transmission to Solenoid hose (329232-3X) to the Hydraulic Valve Bearing Cap 90° Elbow fitting. (**Figure 19**)

Figure 19

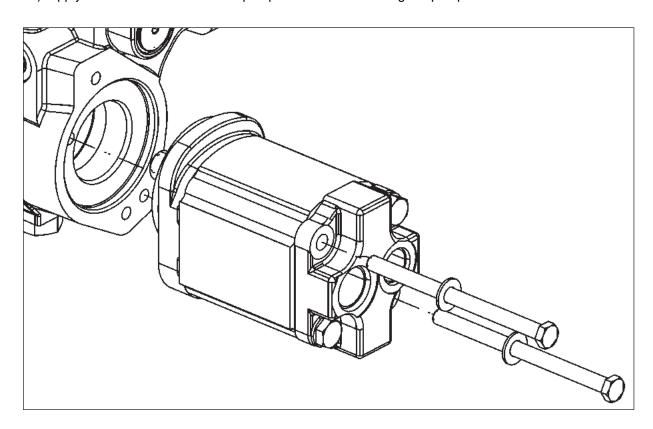

Figure 20

Pump Installation

The Parker/Chelsea CGP-P11 pumps listed below have a special pump flange designed to mount the pump to the 247 Series P.T.O. without modifying the pump flange. This allows the same pump to be installed on either 4 x 2 or 4 x 4 applications.

NOTE: Each Chelsea P.T.O. that features a female pump shaft will include a packet of lubricant (part number 379688). Apply this to the male end of the pump shaft before installing the pump to the P.T.O.

Chelsea CGP-P11 Series Pump Bolt Specifications

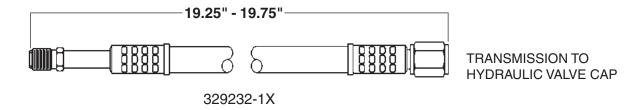

Order Code	Chelsea Pump Model	Pump Tag Number	Bolt Number (2 per Pump)	Bolt Size	Flat Washer (Qty)
16	CGP-P11A016-5FC	334 9110 027	378431-30	.375"-16 x 4.00"	500365-26 (2)

2006-2010 Ford LCF/International CF Overview

Utilizing Chelsea wiring harness 329598X to wire a 247 Series P.T.O. into a 2006-2010 Ford LCF/International CF

CAUTION: Installing a transmission-mounted P.T.O. without the required P.T.O. wiring may result in transmission failure. To minimize the risk of transmission damage, P.T.O. controls must be integrated into the vehicle wiring.

NOTE: Installation requires the lengthening and splicing of the current Chelsea harness.

Follow the normal P.T.O. installation instructions provided.

 Installer supplied wire will connect between the Chelsea supplied butt connectors (SK-448 or SK-449) and the OE supplied blunt connectors located in the blunt cut wiring bundle on the left side of the transmission.

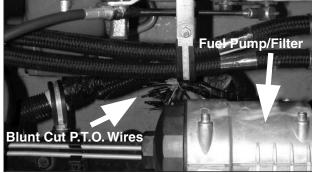

Fig. 1

Chelsea switch panel mounting suggestion.

2. Switch panel may be located in cavity below the lighter.

NOTE: Clearance cut required for fitment.

Fig. 2

3. Relocate the relay located on the back of the Chelsea switch panel. It is adhered with double stick tape

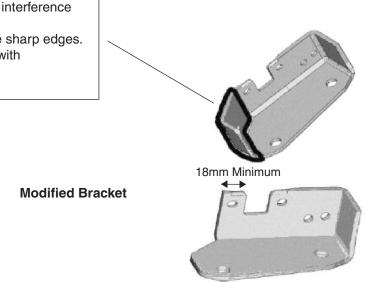

Fig. 3

2005 Model Year TorqShift™ Shift Bracket – Field Modification

Current Bracket

- Cut this area to eliminate interference with the P.T.O. housing.
- Grind surface to eliminate sharp edges.
- Clean and paint the part with rust preventative.

Models Affected: 2005 Model Year F250/350/450/550 with TorqShift[™] 5-Speed Automatic Transmission with P.T.O. Provision Option.

Background: The shift bracket holding the shift linkage in position was revised for 2005 model year. That change resulted in the bracket interfering with the Chelsea and Muncie P.T.O.s by approximately 2.8 mm, preventing installation of the aftermarket P.T.O.s.

Recommendation: Grind or cut away a portion of the bracket to gain clearance. The illustration in the attachment to this bulletin depicts how much material may be removed without deteriorating the strength and reliability of the bracket and transmission gearshift function. Affected vehicles built approximately November 15th, 2004, will incorporate a revised shift bracket that provides clearance to the aftermarket P.T.O.

Warning: The modification shown is the only one supported. No modifications to the bracket mounting holes are acceptable.

For additional questions please contact the Ford Truck Body Builders Advisory Service at toll-free number 1-877-840-4338, or by e-mail at bbasqa@ford.com. QVM Bulletins can be found at www.fleet.ford.com/truckbbas.

Notes

Power Take-Off Maintenance

Power Take-Off Maintenance

Due to the normal and sometimes severe torsional vibrations that Power Take-Off units experience, operators should follow a set maintenance schedule for inspections. Failure to service loose bolts or Power Take-Off leaks could result in potential auxiliary Power Take-Off or transmission damage.

Periodic P.T.O. MAINTENANCE is required by the owner/operator to ensure proper, safe and trouble free operation.

Daily: Check all air, hydraulic and working mechanisms before operating

P.T.O. Perform maintenance as required.

Monthly: Inspect for possible leaks and tighten all air, hydraulic and

mounting hardware, if necessary. Torque all bolts, nuts, etc. to Chelsea specifications. Ensure that splines are properly lubricated, if applicable. Perform maintenance as required.

With regards to the direct mounted pump splines, the P.T.O. requires the application of a specially formulated anti-fretting, high pressure, high temperature grease. The addition of the grease has been proven to reduce the effects of the torsional vibrations, which result in fretting corrosion on the P.T.O. internal splines as well as the pump external splines. Fretting corrosion appears as a "rusting and wearing" of the pump shaft splines. Severe duty applications, which require long P.T.O. running times and high torque may require more frequent regreasing. Applications such as Utility Trucks that run continuously and are lightly loaded also require frequent regreasing due to the sheer hours of running time. It is important to note that service intervals will vary for each and every application and is the responsibility of the end user of the product. Chelsea also recommends that you consult your pump owner's manuals and technical services for their maintenance guidelines. Fretting corrosion is caused by many factors and without proper maintenance; the anti-fretting grease can only reduce its effects on components.

Chelsea offers the grease to our customers in two packages. The first is a 5/8 fluid ounce tube (379688), which is included with every applicable P.T.O., and the second is a 14-ounce grease cartridge (379831).

Warranty: Failure to comply entirely with the provisions set forth in the appropriate Owner's Manual will result in voiding of ALL Warranty consideration.

Offer of Sale

The items described in this document and other documents and descriptions provided by Parker Hannifin Corporation, its subsidiaries and its authorized distributors ("Seller") are hereby offered for sale at prices to be established by Seller. This offer and its acceptance by any customer ("Buyer") shall be governed by all of the following Terms and Conditions. Buyer's order for any item described in its document, when communicated to Seller verbally, or in writing, shall constitute acceptance of this offer. All goods, services or work described will be referred to as "Products".

- 1. Terms and Conditions. Seller's willingness to offer Products, or accept an order for Products, to or from Buyer is subject to these Terms and Conditions or any newer version of the terms and conditions found on-line at www.parker.com/saleterms/. Seller objects to any contrary or additional terms or conditions of Buyer's order or any other document issued by Buyer.
- 2. Price Adjustments; Payments. Prices stated on Seller's quote or other documentation offered by Seller are valid for 30 days, and do not include any sales. use, or other taxes unless specifically stated. Unless otherwise specified by Seller, all prices are F.C.A. Seller's facility (INCOTERMS 2010). Payment is subject to credit approval and is due 30 days from the date of invoice or such other term as required by Seller's Credit Department, after which Buyer shall pay interest on any unpaid invoices at the rate of 1.5% per month or the maximum allowable rate under applicable law. 3. Delivery Dates; Title and Risk; Shipment. All delivery dates are approximate and Seller shall not be responsible for any damages resulting from any delay. Regardless of the manner of shipment, title to any products and risk of loss or damage shall pass to Buyer upon placement of the products with the shipment carrier at Seller's facility. Unless otherwise stated, Seller may exercise its judgment in choosing the carrier and means of delivery. No deferment of shipment at Buyers' request beyond the respective dates indicated will be made except on terms that will indemnify, defend and hold Seller harmless against all loss and additional expense. Buyer shall be responsible for any additional shipping charges incurred by Seller due to Buyer's acts or omissions. 4. Warranty. Parker Chelsea warrants that all products sold conform to the applicable Parker Chelsea standard specification for the lesser period of: 2 years (24 Months) from Date of service or 2-1/2 years(30 Months) from date of build (as marked on the product name plate). The prices charged for Seller's products are based upon the exclusive limited warranty stated above, and upon the following disclaimer: DISCLAIMER OF WARRANTY: THIS WARRANTY COMPRISES THE SOLE AND ENTIRE WARRANTY PERTAINING TO PRODUCTS PROVIDED HEREUNDER. SELLER DISCLAIMS ALL OTHER WARRANTIES, EXPRESS AND IMPLIED, INCLUDING DESIGN, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.
- 5. Claims; Commencement of Actions. Buyer shall promptly inspect all Products upon delivery. No claims for shortages will be allowed unless reported to the Seller within 10 days of delivery. No other claims against Seller will be allowed unless asserted in writing within 30 days after delivery. Buyer shall notify Seller of any alleged breach of warranty within 30 days after the date the defect is or should have been discovered by Buyer. Any action based upon breach of this agreement or upon any other claim arising out of this sale (other than an action by Seller for an amount due on any invoice) must be commenced within 12 months from the date of the breach without regard to the date breach is discovered.
- 6.LIMITATION OF LIABILITY. UPON NOTIFICATION, SELLERWILL, AT ITS OPTION, REPAIR OR REPLACE A DEFECTIVE PRODUCT, OR REFUND THE PURCHASE PRICE. IN NO EVENT SHALL SELLER BE LIABLETO BUYER FOR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF, OR AS THE RESULT OF, THE SALE, DELIVERY, NON-DELIVERY, SERVICING, USE OR LOSS OF USE OF THE PRODUCTS OR ANY PART THEREOF, OR FOR ANY CHARGES OR EXPENSES OF ANY NATURE INCURRED WITHOUT SELLER'S WRITTEN CONSENT, EVEN IF SELLER HAS BEEN NEGLIGENT, WHETHER IN CONTRACT, TORT OR OTHER LEGALTHEORY. IN NO EVENT SHALL SELLER'S LIABILITY UNDER ANY CLAIM MADE BY BUYER EXCEED THE PURCHASE PRICE OF THE PRODUCTS.
- 7. User Responsibility. The user, through its own analysis and testing, is solely responsible for making the final selection of the system and Product and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application and follow applicable industry standards and Product information. If Seller provides Product or system options, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the Products or systems.
- 8. Loss to Buyer's Property. Any designs, tools, patterns, materials, drawings, confidential information or equipment furnished by Buyer or any other items which become Buyer's property, will be considered obsolete and may be destroyed by Seller after two consecutive years have elapsed without Buyer ordering the items manufactured using such property. Seller shall not be responsible for any loss or damage to such property while it is in Seller's possession or control.
- 9. Special Tooling. A tooling charge may be imposed for any special tooling, including without limitation, dies, fixtures, molds and patterns, acquired to manufacture Products. Such special tooling shall be and remain Seller's property notwithstanding payment of any charges by Buyer. In no event will Buyer acquire any interest in apparatus belonging to Seller which is utilized in the manufacture of the Products, even if such apparatus has been specially converted or adapted for such manufacture and notwithstanding any charges paid by Buyer. Unless otherwise agreed, Seller shall have the right to alter, discard or otherwise dispose of any special tooling or other property in its sole discretion at any time.
- 10. Buyer's Obligation; Rights of Seller. To secure payment of all sums due or otherwise, Seller shall retain a security interest in the goods delivered and this agreement shall be deemed a Security Agreement under the Uniform Commercial Code. Buyer authorizes Seller as its attorney to execute and file on Buyer's behalf all documents Seller deems necessary to perfect its security interest.

- 11. Improper use and Indemnity. Buyer shall indemnify, defend, and hold Seller harmless from any claim, liability, damages, lawsuits, and costs (including attorney fees), whether for personal injury, property damage, patent, trademark or copyright infringement or any other claim, brought by or incurred by Buyer, Buyer's employees, or any other person, arising out of: (a) improper selection, improper application or other misuse of Products purchased by Buyer from Seller; (b) any act or omission, negligent or otherwise, of Buyer; (c) Seller's use of patterns, plans, drawings, or specifications furnished by Buyer to manufacture Product; or (d) Buyer's failure to comply with these terms and conditions. Seller shall not indemnify Buyer under any circumstance except as otherwise provided.
- 12. Cancellations and Changes. Orders shall not be subject to cancellation or change by Buyer for any reason, except with Seller's written consent and upon terms that will indemnify, defend and hold Seller harmless against all direct, incidental and consequential loss or damage. Seller may change product features, specifications, designs and availability with notice to Buyer.
- 13. Limitation on Assignment. Buyer may not assign its rights or obligations under this agreement without the prior written consent of Seller.
- 14. Force Majeure. Seller does not assume the risk and shall not be liable for delay or failure to perform any of Seller's obligations by reason of circumstances beyond the reasonable control of Seller (hereinafter "Events of Force Majeure"). Events of Force Majeure shall include without limitation: accidents, strikes or labor disputes, acts of any government or government agency, acts of nature, delays or failures in delivery from carriers or suppliers, shortages of materials, or any other cause beyond Seller's reasonable control.
- 15. Waiver and Severability. Failure to enforce any provision of this agreement will not waive that provision nor will any such failure prejudice Seller's right to enforce that provision in the future. Invalidation of any provision of this agreement by legislation or other rule of law shall not invalidate any other provision herein. The remaining provisions of this agreement will remain in full force and effect.
- 16. Termination. Seller may terminate this agreement for any reason and at any time by giving Buyer thirty (30) days written notice of termination. Seller may immediately terminate this agreement, in writing, if Buyer: (a) commits a breach of any provision of this agreement (b) appointments a trustee, receiver or custodian for all or any part of Buyer's property (c) files a petition for relief in bankruptcy on its own behalf, or by a third party (d) makes an assignment for the benefit of creditors, or (e) dissolves or liquidates all or a majority of its assets.
- 17. Governing Law. This agreement and the sale and delivery of all Products hereunder shall be deemed to have taken place in and shall be governed and construed in accordance with the laws of the State of Ohio, as applicable to contracts executed and wholly performed therein and without regard to conflicts of laws principles. Buyer irrevocably agrees and consents to the exclusive jurisdiction and venue of the courts of Cuyahoga County, Ohio with respect to any dispute, controversy or claim arising out of or relating to this agreement.
- 18. Indemnity for Infringement of Intellectual Property Rights. Seller shall have no liability for infringement of any patents, trademarks, copyrights, trade dress, trade secrets or similar rights except as provided in this Section. Seller will defend and indemnify Buyer against allegations of infringement of U.S. patents, U.S. trademarks, copyrights, trade dress and trade secrets ("Intellectual Property Rights"). Seller will defend at its expense and will pay the cost of any settlement or damages awarded in an action brought against Buyer based on an allegation that a Product sold pursuant to this Agreement infringes the Intellectual Property Rights of a third party. Seller's obligation to defend and indemnify Buyer is contingent on Buyer notifying Seller within ten (10) days after Buyer becomes aware of such allegations of infringement, and Seller having sole control over the defense of any allegations or actions including all negotiations for settlement or compromise. If a Product is subject to a claim that it infringes the Intellectual Property Rights of a third party, Seller may, at its sole expense and option, procure for Buyer the right to continue using the Product, replace or modify the Product so as to make it noninfringing, or offer to accept return of the Product and return the purchase price less a reasonable allowance for depreciation. Notwithstanding the foregoing, Seller shall have no liability for claims of infringement based on information provided by Buyer, or directed to Products delivered hereunder for which the designs are specified in whole or part by Buyer, or infringements resulting from the modification, combination or use in a system of any Product sold hereunder. The foregoing provisions of this Section shall constitute Seller's sole and exclusive liability and Buyer's sole and exclusive remedy for infringement of Intellectual Property Rights.
- 19. Entire Agreement. This agreement contains the entire agreement between the Buyer and Seller and constitutes the final, complete and exclusive expression of the terms of sale. All prior or contemporaneous written or oral agreements or negotiations with respect to the subject matter are herein merged.
- 20. Compliance with Law, U. K. Bribery Act and U.S. Foreign Corrupt Practices Act. Buyer agrees to comply with all applicable laws and regulations, including both those of the United Kingdom and the United States of America, and of the country or countries of the Territory in which Buyer may operate, including without limitation the U. K. Bribery Act, the U.S. Foreign Corrupt Practices Act ("FCPA") and the U.S. Anti-Kickback Act (the "Anti-Kickback Act"), and agrees to indemnify and hold harmless Seller from the consequences of any violation of such provisions by Buyer, its employees or agents. Buyer acknowledges that they are familiar with the provisions of the U. K. Bribery Act, the FCPA and the Anti-Kickback Act, and certifies that Buyer will adhere to the requirements thereof. In particular, Buyer represents and agrees that Buyer shall not make any payment or give anything of value, directly or indirectly to any governmental official, any foreign political party or official thereof, any candidate for foreign political office, or any commercial entity or person, for the purpose of influencing such person to purchase products or otherwise benefit the business of Seller.
